

8. SUMMARY OF AMENDMENTS TO THE RECORDS REVIEW

Based on the results of the site investigations, the boundaries and extent of all natural features were confirmed and refined. Based on a comparison of the features identified during the records review and the observations made during the site investigation, there are discrepancies with the natural features determined to exist within the project location and 120 metre setback. These discrepancies apply to the size and location of woodland and wetland features and the addition of candidate significant wildlife habitat. These amendments have been made to the mapping prepared during the records review and the revised boundaries of natural features based on site investigation work are shown on **(Figures 5a-d – 16)**. **Table 13** identifies any necessary corrections to the determinations made during the Records Review Report, including the addition of natural features, the absence of natural features identified during the records review and the amendments to boundaries of relevant natural features located within 120 metres of the project location.

Table 13: Summary of Amendments to the Records Review

Natural Feature ID	Identified During Records Review?	Amendment to Records Review Required?	Source of Information for Amendment	Change in Distance Relative to Project Location?	Summary of Amendments
Provincial Parks and Conservation Reserves					
None identified within project location or 120 metre setback.					
ANSI, Life Science					
Lavender Falls Life Science ANSI	✓	☒	n/a	---	n/a
ANSI, Earth Science					
None identified within project location or 120 metre setback.					
Valleylands					
None identified within project location or 120 metre setback.					
Wetlands
